

Senior Software Engineer
Embedded Systems

WHO AM I?

I am an Italian Senior Software Engineer, with a sound background in Mathematical Physics. I worked in several fields, before moving to the Netherlands on 6th of April 2022. I like to think of myself as a serious professional, strongly driven and project oriented. I have a lot to learn and I find interesting and challenging to grow both with junior and more experienced Engineers, being able to focus on solitary projects as well. I've been told I could make outstanding presentations. I am better in person though.

EXPERIENCE

2022 – 2023	Senior Software Engineer I was assigned to ASML as part of a recently out-farmed team ; my main contribution was helping the robustness of the latter, implementing, testing and integrating modules, implementing CI/CD in the w.o.w. of the team in collaboration with the local T&I team and developing the design of a State Machine Framework . C / C++ / Python / Bash / CI/CD / UML and EA / SAFe	TOPIC Embedded Systems.
2018 – 2021	Senior Software Engineer I worked for the fintech startup ProMarket, developing in Python and in C++ a networking framework between the investment clients and the strategy-computing servers on top of the ZeroMQ library. I also developed in Python a sentiment analysis engine . C / C++ / Python / Bash / Networking / ZeroMQ	ProMarket
2015 – 2018	Software Developer I worked for Eveilidia, an IT company. My job was the debugging and maintaining of web applications' back-end running on Linux Fedora. Python / Bash / Fedora Linux / Web Services	Eveilidia
2012 – 2013 freelance	Developer and Tester I proposed the idea and took part in the development of a command line parser , a C version of the Python argparse module . It is available for free download and use on GitHub: Vincenzo1968/myoptParser Python / C / Bash / FOSS / Remote Colab	Ubuntu Italian Community Forum
2006 – open part time	Owner My family started from scratch a business in entertainment, mainly frequented by English-speaking customers. This gave me, moreover, the opportunity of improving my language skills on a daily basis. This business is still working and mainly managed by my older brother, Alessio, who is managed by our mother.	Almalu Trastevere - Cocktail Bar
2010 – 2012	PHP - MySQL Developer I worked for SirCup, a company which organizes sport tournaments. I developed and maintained MySQL databases and relative data-handling and presentation PHP routines , specifically for their soccer tournaments.	SirCup

Miscellanea

After I won a scholarship, I worked for a year as a [librarian](#) in Roma 3 University library. I've been [tutoring students](#) in mathematics and physics for several years, preparing them for any grade level, especially from high school to university. I worked for a couple of years at Chiostro del Bramante, a museum in Roma, [keeping watch on artworks](#) during exhibitions.

EDUCATION

Master's Degree in Mathematical Physics - 110/110 cum Laude

Universita' Roma Tre

My research work investigates the [relaxation to the equilibrium](#) of a [supersaturated gas](#) through a [critical droplet](#) which triggers the phase transition into liquid.

After writing down both a stochastic and a deterministic [mathematical model](#) of this [metastable thermodynamic system](#), I wrote the C++ simulations, run them and carried out a massive data analysis in Python finding out interesting results in the context of [Non-Equilibrium Statistical Mechanics](#).

Bachelor's Degree in Physics

Universita' Roma Tre

High School

Pio IX

Humanities-focused Catholic highschool run by Benedictines Monks.

LANGUAGES

Italian native
English C1
Dutch Self Studying

HOBBIES

I love Art, open air activities like horse riding and hiking, cooking and reading when home.

NON PROFIT

I try to be a better version of me every day, working in charities and being open mostly.

PERSONAL PROJECTS

3D Scanner

Along with the [Open Source Lab at Lochal Library](#) in Tilburg, I am building a 3D scanner based on the [OpenScan](#) project.

The idea is to make this scanner available to people interested in 3D printing to help them have fun with their projects.

Domotics and IoT

I am assembling a [modular home assistant](#), both gathering what is already available through [open source communities](#) and developing functionalities myself.

This project started with a manager for the garden and the automation of an Ikea roller blind.

I am also assembling a [drone](#) as the standalone hardware for this assistant: the chassis is [3D-printed](#) with the support of Lochal library, prototype schematics and circuit board's layout are made with [KiCad](#) and the software runs on a [Raspberrry Pi 4](#).

Chat Bot Training

With the idea of [training a chat bot on a specific domain](#), I am writing down a bibliography of milestones in Software Engineering in order to feed the bot with them.

This project is in its early stage and [its purpose is mostly educative](#).
